RCA's Super AccuColor black matrix picture tube produces sparkling bright, dramatically detailed pictures. Each of the tube's phosphor dots is fully illuminated against a black background for warm, pleasing and natural flesh tones.

Automatic Chroma Control electronically stabilizes color video to the picture on each television channel.

RCA's Perma-Chrome shadow mask assures excellent color purity in the picture, no matter how long the set has been turned on. It automatically compensates for shadow mask expansion during picture tube warm-up.

A black matrix background separates the picture tube's color phosphors, producing sharp contrast when phosphors are fully illuminated by electron beams.

Powerful, reliable 100% solid state RCA XL-100 chassis has no tubes to burn out, a major cause of TV breakdowns. All tubes have been replaced by cool-operating solid state components which are designed for last longer with fewer chassis repairs. **Chassis voltage*** 90-260 volts.

Plug-in RCA AccuCircuit modules simplify servicing. A majority of the industry and components of this RCA XL-100 chassis are contained in seven plug-in modules, each designed for excellent performance and reliability. Should an AccuCircuit module failure occur, the service technician simply removes it and plugs in a new one quickly and easily.

Five miniature integrated circuits perform key functions in the set's Automatic Fine Tuning, picture I.F., sound and color systems. These marvels of solid state technology consist of microscopic assemblies of many components bonded on tiny, durable silicon wafers. They're among the most advanced and reliable solid-state devices used in TV today.

Circuit breaker with reset push button eliminates nuisance service calls for simple fuse replacement.

Fidelity-engineered sound system features a 5" oval speaker that is laboratory matched with the amplifier for tone-balanced performance. Sound comes on instantly when you switch on the set, at the same volume setting where you left it.

Push-button AccuMatic IV (ACM) automatically brings color, tint, brightness and contrast within a normal preset range with a single control. Each of the four adjustments may also be made individually if you desire. To enhance green flesh tones, ACM may be switched off.

Push-button Automatic Fine Tuning (AFT) pinpoints and holds the correct broadcast signal on each channel more accurately than with manual fine tuning - both VHF (2-13) and UHF (14-83). With AFT switched on, just turn to the channel you want. It will be fine tuned automatically.

Sensitive solid state VHF tuner (channels 2 to 13) protects against interference and helps deliver excellent reception in both metropolitan and fringe signal areas. Designed for reliability, it is one of the most powerful tuners in the color television industry.

70-position solid state UHF tuner (channels 14 to 83) features click stops and number identification for all UHF positions. Some channels may require initial manual fine tuning, after which AFT pinpoints and holds the correct signal automatically.

Lighted "window" indicators show VHF or UHF channel.

Antennas are included with the set for both VHF and UHF reception, plus connections for external antennas.

A SUPER VALUE RCA XL-100 CONSOLE
